

EZ Grow System

A Complete GreenHouse Growing System

For Urban Farms and Private Homes

Using Sustainable Green Technologies

“The Future Way of Growing and Eating Fresh”

EZ Grow System

The EZ Grow System consists of Gutters and Vertical Growing Technique. It is the most efficient and economical way of growing high quality produce. The EZ Grow system will enable everyone to harvest high quality vegetables at home. The system is automated. It feeds itself using a non electric pump and the irrigation works on a timer (9 volt battery) . It comes with the following supplies: organic seeds or plants, fertilizers, organic sprays, and growing medium that will last you for a year.

Our growing medium is Organic Coco Coir, It is made from the shell of the coconut that we eat. It goes through a special process of grinding and it is considered to be the best professional growing medium in the market. It has the ability to hold air and water in a perfect ratio.

Our Seeds - We use organic and conventional seeds that have high resistance to diseases, and have high yields with excellent taste.

Our Tomatoes, Cucumbers and Zucchini will produce hundreds of fruits on each plant,

The EZ Grow System can provide you every week with the following:

Chives – Parsley – Cilantro - Lettuce – Celery – Mint – Thyme – Oregano - Spring Mix (Spring Mix consists of Spinach, Green & Red chard, Beet leaves, Mustard Mizuna, and Arugula or a choice of your own mix)

If you are using about 3 bunches of each per week, you will not have to buy these items anymore, you will enjoy a new fresh healthy taste.

Tomatoes – Cucumbers – Zucchini – Strawberries

For a large part of the year you will have plenty of production.

For Home Users

Our goal is to have every household produce most of the vegetables and greens that they consume at home.

The EZ Grow System can provide you every week with:

Chives – Parsley – Cilantro - Lettuce – Celery - Mint – Thyme – Oregano - Basil - Spring Mix (Spring Mix consists of Spinach, Green & Red chard, Beet leaves, Mustard Mizuna, and Arugula or a choice of your own mix)

If you are using about 3 bunches of each per week, you will not have to buy these items anymore.

Tomatoes – Cucumbers – Zucchini - Strawberries

For a large part of the year you will have plenty of production.

Once The EZ Grow System is in production, you will enjoy a new fresh healthy taste.

You will also realize that you harvest what you need and there is no food waste.

Very low maintenance, about one hour per week.

For Commercial Users

To be able to place the EZ Grow System anywhere in the city and supply local supermarkets and restaurants.

To provide a unique commercial unit model, support and agreement that allows anyone from any industry to become food producers.

To supply customized EZ Grow System facilities that maximize efficiency through automated growing systems.

Our System optimizes food yields, flavor, nutrition and extends shelf life using fewer resources.

Our technology feeds more people healthier food.

The EZ Grow System is perfect for roof tops, parking lots, vacant lots, or any other sunny backyards.

For Unique Business Opportunities Please contact me directly at yossi@aofseeds.com (805) 290-8700

The Gutters

The Gutters are mounted to the side walls and floor. The coco medium, the growing boxes and coco bags are placed in the Gutters. While the automated irrigation is on, water will be collected from all gutters to a main drainage pipe to an outlet for reuse. This design and growing technique provides the ultimate growing space Utilization. If you plant the content of the EZ Grow System outdoors, you would need a space that is **FOUR TIMES LARGER!**

Vertical Growing

The Vertical Growing Technique commonly used by professional growers around the world enables the plant to produce maximum yield in a minimum amount of space. Vine plants such as tomatoes, cucumbers, and zucchini will produce hundreds of fruits on each plant.

The Coco

An organic growing medium made by grounded coconut shells.

It is a bi product of the Coconut we eat.

Coco is used by professional growers around the world.

It has a great ability to hold air and water in a perfect ratio which enables the plants to develop very strong and healthy roots.

The Greenhouse Structure

- **The greenhouse structure -**
- SNAP & GROW 8` Series provides the extras of a premium greenhouse with the ease of a basic one. Its supreme height and wide hinged double doors create a comfortable working space. The reinforced aluminum frame and the unbreakable Crystal Clear Polycarbonate panels will shine and flourish in your garden. This giant greenhouse is easily installed with the SNAP & GROW Assembly System.
- **Massive greenhouse**
 - High headroom (2.60m) and high eaves (1.61m) for superior working space
 - Wide and high double door fits wheelbarrow, workstation etc.
 - Reinforced, double wall, rust resistance aluminum structure
 - Maintenance free
- **Fast & Easy Assembly**
 - Frame assembly Smart Lock™ connectors - screws free
 - Panels sliding into locking tracks
 - Pre-assembled doors and windows save time and efforts
 - Illustrated step-by-step assembly instructions for clear installation process
- **Crystal Clear polycarbonate panels**
 - Over 90% light transmission
 - Virtually unbreakable Polycarbonate panels
 - 100% UV protected panels - do not yellowed.
 - Blocks harmful UV rays to protect inner equipment
- **Additional features to improve horticulture**
 - Automated Vent window included (Will open automatically when hot and will close automatically when cold, it works on heat sensor, no electricity is needed)
 - Includes dual rain gutters for water collection
 - Compact light weight packaging fit to car's back seat to reduce transportation costs

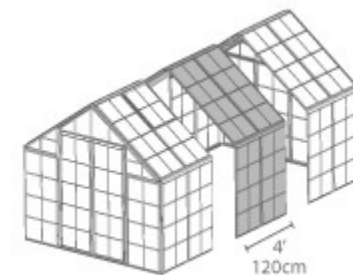

Modular system

Extension unit creates variety of large sizes (8x12, 8x16...)

Extension unit should be assembled at the same time with the basic unit.

Multiple extensions can be used to extend the greenhouse up to 8'x20' / 249 x 804cm
